

How to Farm in the City

“**How to Farm in the City**”, made possible with a USDA Conservation Innovation Grant, is a dynamic web based resource designed to help people learn the ins and outs of farming in town. Urban farming, done well, has the potential to provide good healthy food with less pollution and energy inputs than food from far away. Urban farming done improperly poses pollution risks to our air, land and water, and even risks to human health. If you are planning on farming in the City, you may want to include high tunnels (hoop houses) to extend your growing season, raise chickens for eggs and meat, harvest honey by keeping bees, build a composting and/or vermicomposting (using worms to break down food) bin to create your own rich soil and reduce waste, incorporate water and energy saving techniques and more. This is a living document designed to help you find resources to do all of those things, essentially, a guide to streamline your process of How to Farm in the City.

If you need information that is missing, or have a favorite urban farming related website to share, contact Mike at the Watershed Committee of the Ozarks and we will work together to make the site better.

Local Laws/Ordinances City Ordinances are designed to keep our community safe and grow smarter. Here are a few that may pertain to the farming activities you are interested in.

Examples and Inspiration

Springfield Urban Agriculture Coalition promotes healthy lifestyles and environments through hands on education about production and consumption of locally-produced, natural, healthy foods. <http://www.springfielduac.org/>

Growing Power is a national nonprofit organization and land trust supporting people from diverse backgrounds, and the environments in which they live, by helping to provide equal access to healthy, high-quality, safe and affordable food for people in all communities. Growing Power implements this mission by providing hands-on training, on-the-ground demonstration, outreach and technical assistance through the development of Community Food Systems that help people grow, process, market and distribute food in a sustainable manner. <http://www.growingpower.org/>

The Urban Farming™ mission is to create an abundance of food for people in need by supporting and encouraging the establishment of gardens on unused land and space while increasing diversity, raising awareness for health and wellness, and inspiring and educating youth, adults and seniors to create an economically sustainable system to uplift communities around the globe. <http://www.urbanfarming.org/about.html>
